TRUST OUR EXPERTS WHO CHECK EVERY SEAM.

SPECIALISTS IN
**FLAT
ROOFS**

WHEN YOU ARE SPENDING MORE TIME AND MONEY ON PROBLEMS CAUSED BY A LEAKY ROOF, IT'S TIME TO REPLACE IT.

FULL SERVICE ROOFING CONTRACTOR

We've been in business since 1986 and have installed over five million, and rapidly increasing, square feet of flat roofs. In addition to re-roofs (metal, rubber, and built-up) we also install roofs for new construction, and offer repair and inspection services. Our repair and inspection services assure you are getting the maximum life from your roof while also being aware of the optimal time to replace it.

Consistently we've earned our supplier's Elite Contractor award which is achieved for exceptional grades on our installation quality and attention to detail. Only the top 12% of roofing contractors attain this designation.

QUALITY MATERIAL BACKED BY BEST WARRANTY AVAILABLE

The single-ply roofing system allows for up to 85% of seams to be factory welded so minimal field seaming is needed. The cool zone white surface delivers 87% reflectivity which reduces energy costs. The PVC membrane has a number of other benefits including: watertight integrity, has some of the highest Energy Star® ratings, doesn't require solvents nor adhesives to install which can break down, is chemical resistant, withstands high winds and the harsh weather and temperature extremes of our area, and is virtually maintenance-free. All of this is backed by a comprehensive, transferable, warranty that extends up to 15 or 20 years on labor and materials.

DURO-LAST THE WORLD'S BEST ROOF. An Authorized Duro-Last Contractor

EVER WONDER WHAT GOES ON DURING A ROOFING PROJECT?

Our crew strictly adheres to OSHA standards, works efficiently, and respects you and your business/property.

CUSTOM PRE-FABRICATED SYSTEM is manufactured specifically for each roofing project to ensure minimal waste and optimal fit.

WE HOT AIR WELD ALL SEAMS. Others use adhesive which breaks down and causes leaks over time. Precise installation and heat sealing of custom pre-fabricated flashings is done around HVAC units, vents, pipes, and other protrusions on your roof.

Upon completion of your roof, **WE CAREFULLY CHECK EACH SEAM.** A second inspection occurs by the manufacturer of the membrane roofing system and the comprehensive warranty goes into effect.
